

Wi-Fi Direct

Highlight Feature

- > Printing and scanning are available from a mobile device.
- > A direct connection to the MFP without an access point is established.
- > Only a simple setting is required and security is ensured.
- > Wired or wireless LAN can be used at the same time.

Your challenge

Even if business travelers and visitors are in a hurry to print out data, they cannot use the MFP because they are not allowed to join the network to which the MFP is connected.

It is troublesome to send data to someone who can access the MFP to print it out. However, there is a concern about security if anyone can easily access the MFP.

It would be convenient if security were ensured and access to the MFP were enabled...

Our solution

The Toshiba e-BRIDGE Next MFP that complies with the Wi-Fi Direct standard allows you to access the MFP not via the in-house network. Even business travelers and visitors are allowed to access the MFP, print data or capture scan data from wireless LAN compatible devices, such as smartphones, tablets and computers^(*). A simple but secure connection is established, thus Wi-Fi Direct is easily available without changing the in-house LAN environment.

As similar security to that when connected via wireless LAN is provided, security is ensured.

WI-FI DIRECT

Your benefits

Wi-Fi Direct is a convenient feature with a wide range of utilization. It enables access to the MFP from mobile devices owned by business travelers, visitors or individuals not via the in-house network, to print data or capture scan data ^{(*)1}. Up to 8 client devices can be connected to one MFP. As similar security to that when connected via wireless LAN is provided since the passphrase and SSID are displayed at each access to the MFP, security is ensured ^{(*)2}.

The Wi-Fi Direct feature can be used with wired or wireless LAN, without changing the in-house LAN environment ^{(*)3}. Only a simple setting is required with minimum IT resources. This feature makes mobile applications, such as e-BRIDGE Print & Capture, Air Print™ and Mopria™, more user-friendly, helping you easily print business negotiation data and photos stored in mobile devices.

In the current situation in which mobile devices are common, you can get convenience and security.

Where to use

The Wi-Fi Direct feature is suitable for a high security office environment. In particular, the optimal user is a company which has many business travelers and visitors.

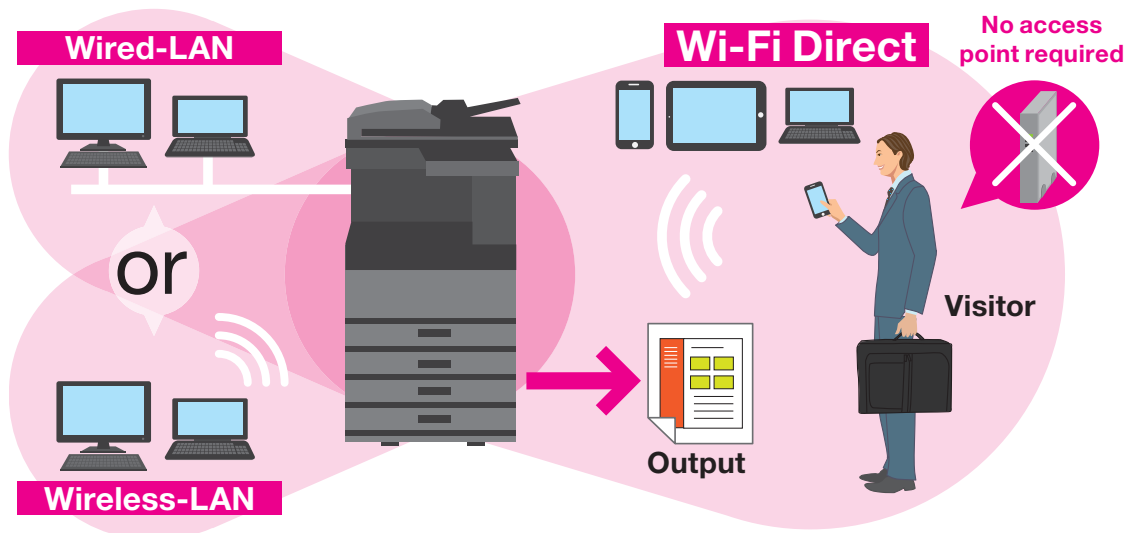

- > General Office (Headquarter/branch)
 - Access from business travelers and visitors
 - High security to restrict access to the in-house network
 - Combination with general wireless LAN or wired LAN ^{(*)2}
- > Shared office environment
 - High security
 - Accessible from up to 8 users

The Wi-Fi Direct feature provides safety and convenience to effectively use the MFP, leading to operational efficiency improvement in the office.

(*)1 e-BRIDGE Print & Capture supports capture of scan data.

(*)2 Information specified during the connection varies depending on the method of connection.

(*)3 Wired and wireless LAN cannot be supported at the same time.
